Network Security WS17/18
Challenge 07

Exercise 7 is hosted at `netsec.net.in.tum.de` at port 20009.

Bob uses plain RSA without any padding scheme to sign the commands of his file server. Alice got hold of the text and signature for the command 'no pdf!'. Can you generate a command and signature that gives you the pdf.

Note, you will **not** have to do any call to crypto libraries to solve this task. Just think about Bob's signature operation.

Note: to run `bob.py`, on debian/ubuntu, you need to install `python3-crypto`.
